Supplementary documentation for the Bosch OSSO-SO Configurator tool

Issue   **Defining an OSS-SO site in a third-party configuration tool**

Topic   Using the Allegion OSSMobile tool

Overview

Before they can be mapped into a Bosch access control system (ACS), the main parameters of an OSS-SO locking system (also known as an OSS-SO "site") must be defined in the manufacturer's own configuration tool.

Here we use the Allegion OSSMobile application.

- This tool exports a configuration in the form of an XML file, to form the foundation of the Bosch OSS-SO configuration.

- The person responsible for configuring OSO in the Bosch ACS imports the XML file into the Bosch OSO Configurator tool, and adds to it those details that the Bosch ACS requires.

Prerequisite hardware and software

- The Allegion OSSMobile Application

- USB radio stick or NFC in a USB port of the computer where the OSSMobile application is running.

Defining an OSS-SO locking system with the OSSMobile application

Introduction

We define a basic OSS-SO locking system (also known as a "site") and export it to an XML file for further processing in the Bosch OSO Configurator tool.

Configuring the application for MIFARE DESfire cards
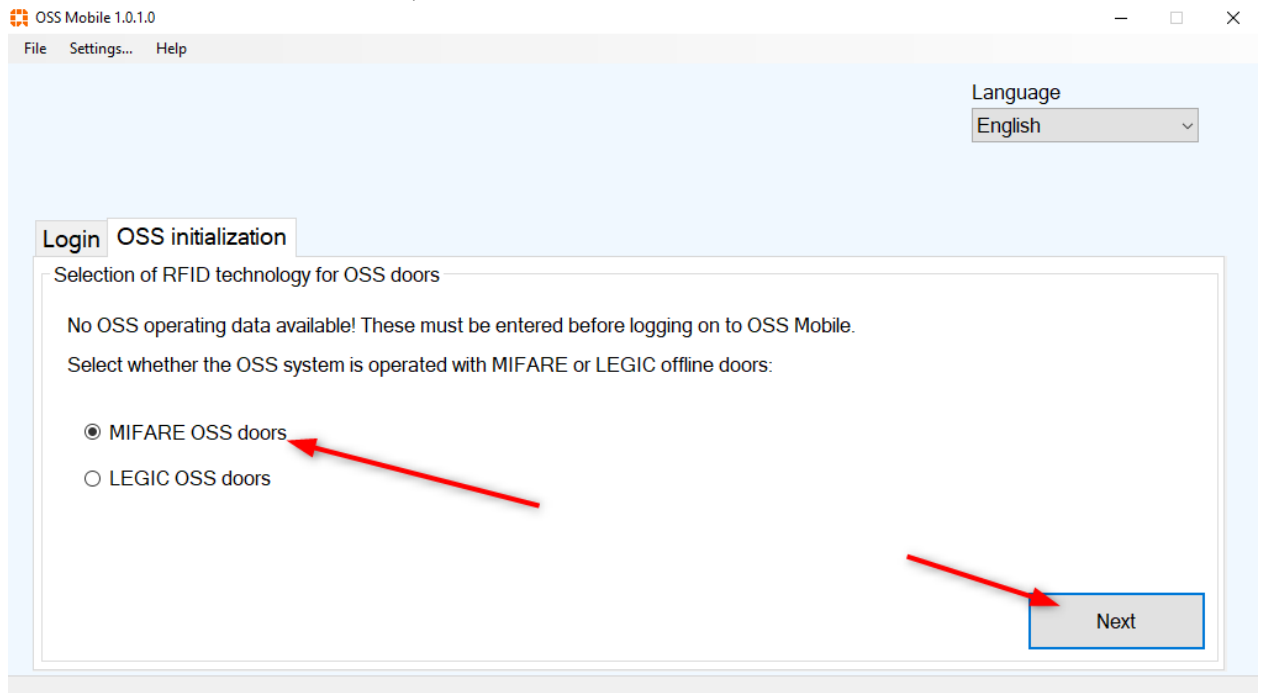

1. Start the OSSMobile application

8. Click **Open** to import the configuration

If the configuration is free of errors, a list of locks will appear. (This illustrated example shows a configuration containing only one lock).

Note: If a schema check error appears when opening the configuration:

then abort the import and make the following edit to the configuration file before re-importing:
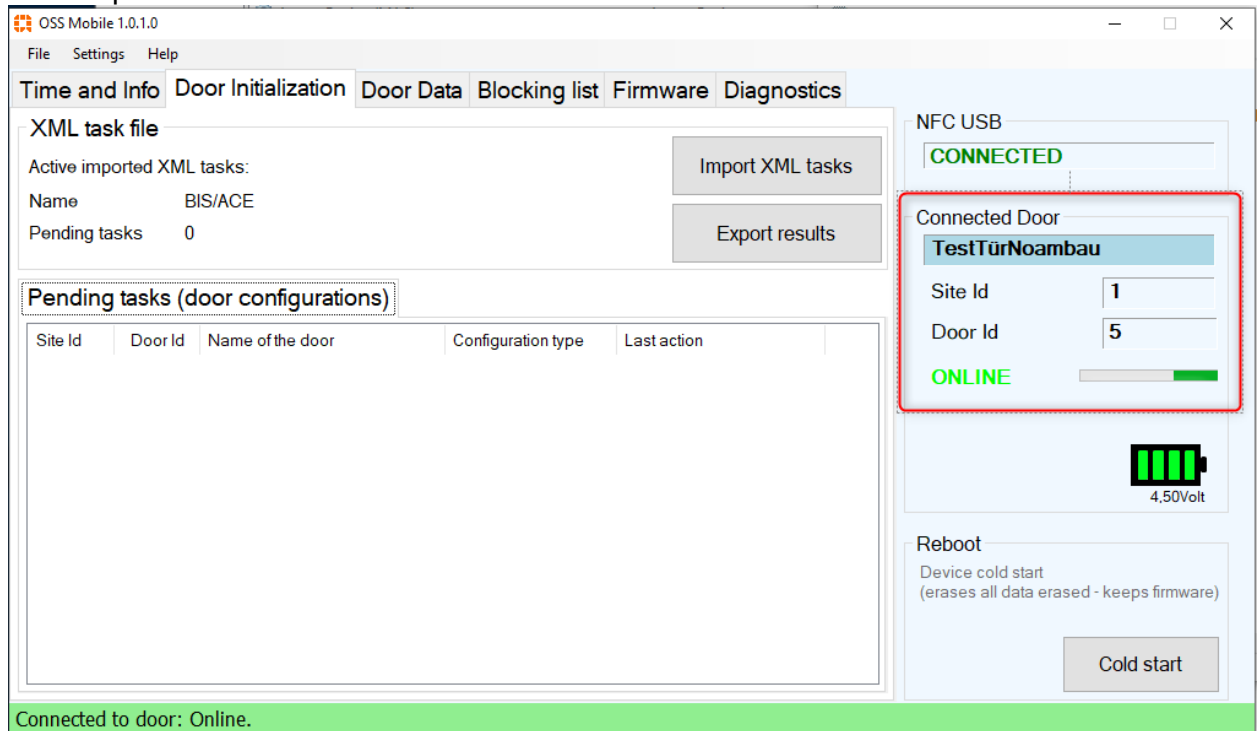

Replace the string:

`<Configuration xmlns="http://oss-so.com">`

with

`<Configuration>`

9. Select the AMS lock configuration that you want to assign, and click **Assign ID** .
The tool writes the configuration to the lock and displays the Site ID and Door ID in the dialog (see below). The configuration and the assignment to the AMS configuration are now complete.

10. Save the XML file in a location to which the Bosch OSO Configurator tool has access.

11. Proceed to the chapter in `OSS-SO_Integration.pdf` for instructions on importing an OSS-SO site in the Bosch OSO Configurator tool.
